BUFFERS

- Standard
- H1
- H2
- H3
- Pistol
- RDB
- JPS
- JPH
- JP9

Go shorter without giving up the familiar fit and adjustability of a carbine stock.

The Maxim Defense Carbine K Buffer Tube Kit is built around a compact 6-inch buffer tube, shortening the rear of the platform compared to a standard carbine receiver extension. By shifting the stock's adjustment range forward, the Carbine K creates a shorter overall package and reduced length of pull–ideal for compact builds and shooters who prefer a tighter, more maneuverable setup.

The system combines the 6-inch Carbine K Buffer Tube with your choice of compatible buffer configuration, allowing the system to be tailored to the firearm rather than relying on a one-size-fits-all buffer setup.

The kit also includes a MIL-SPEC castle nut and receiver latch plate and is compatible with compact stock options including the Magpul MOE SL-M, B5 Systems Sierra K and LWRC UCIW.

Compact where it counts. Configurable where it matters.

FEATURES & SPECS

- 9 Buffer Options: Standard, H1, H2, H3, Pistol, RDB, JPS, JPH, JP9
- 6.06" Overall Length
- Weight ranges from 5 to 11 ounces based on buffer choice
- 1.15" Outer Diameter / 1" Inner Diameter
- 7075-T6 Aluminum Material Composition
- Anodized Finish
- 1 3/16-16 UN-2A Thread
- Comes with end plate & castle nut
