

MDX™

Comfort and compactness, the MDX™ Series has always been a staple for CQB firearms. The MDX™ series was designed and tested to handle the fierce demands of the Tier 1 community. The right upgrades, features, and technology make sure the MDX™ will stand up to whatever you put it through.

Each MDX™ is supplied with a Gen:7 CQB stock. The CQB system combines form and function flawlessly. Adding just 5.3" to the receiver when fully compact, yet extending fully to 10", you get a compact package with the full length-of-pull of standard carbine stocks.

Our MDX™ series firearms are also equipped with the Maxim's HATEBRAKE™ muzzle booster. This patent-pending device significantly reduces recoil, decreases the flash signature, pushes gasses and concussion waves downrange away from the operator and improves overall performance in short barrel pistols and rifles.

FEATURES

- » HATEBRAKE™ installed under handguard/A2 for 11.5" and longer barrels
- » MOA accurate
- » M-slot compatible handguard
- » Military grade materials
- » Purposefully built for each available caliber
- » All components are MIL-SPEC +
- » HK height rail for a more rigid upper receiver
- » Military tested rapid deploying PDW & B5 stock
- » Optimized low flash
