

PDX™

Voted BEST OF SHOT 2019 by RECOIL Magazine, the Maxim Defense PDX™ was born from the SOCOM PDW solicitation to meet the demands of the Tier 1 community.

Designed for close-quarter encounters, the PDX™ delivers maximum energy on target in a subcompact platform, measuring just 18.75" in overall length.

At its core, the PDX™ features the Maxim SCW™ system, a patent-pending design that reduces the stock length to 4" and includes an integrated BCG with interchangeable buffer weights for optimal performance. Equipped with Maxim's HATEBRAKE™ muzzle booster, the PDX™ significantly reduces recoil, decreases flash signature, and directs gases and concussion wave downrange, enhancing overall performance.

FEATURES

- » HATEBRAKE™ installed under handguard
- » 2 MOA accurate
- » M-slot compatible handguard
- » Military grade materials
- » SCW buffer-carrier
- » HK height rail for a more rigid upper receiver
- » Military tested rapid deploying PDW stock
