

CARBINEK

STOCK SYSTEM

Get the complete Carbine K System in one compact package.

At the heart of the kit is Maxim Defense's 6-inch Carbine K Buffer Tube, designed to shorten the rear of the platform compared to a standard carbine receiver extension. The shorter tube shifts the stock's adjustment range forward, reducing overall length and length of pull while maintaining the versatility of an adjustable stock.

The system pairs the Carbine K Buffer Tube with your choice of 9 compatible buffer configurations, allowing the system to be tailored to the firearm.

A MIL-SPEC castle nut, receiver latch plate and Magpul MOE SL-M Stock (available in black & FDE) complete the kit, providing everything needed for a compact Carbine K stock and buffer system in one package.

**Kit also available without stock.*
